

# Wholesale Line Rental - WLR

## BASIC MEANINGS

---

### Wholesale Line Rental Service (WLR)

Thanks to the Wholesale Line Rental (WLR) Service, a Telecommunications Service Provider will be able to lease out the access line (PSTN & ISDN BRA) of an end customer and provide him with fixed telephony services.

### Carrier Preselection Service (Scheme 3)

A necessary prerequisite for the provision of the WLR service is to combine it with the Carrier Preselection – Scheme 3, Service, which offers subscribers the option of choosing, on a permanent basis, that all their telephone calls are carried through the specific Telecommunications Service Provider, without having to dial a characteristic prefix or code number.

### OTE Terminal Equipment

The terminal devices installed by OTE at the end user, necessary for access to the OTE Public Telephone Network.

### Access Line PSTN

Exclusive PSTN line from the switching center owned by the end-user up to the OTE termination point, which together with the end-user's telephone number and telecommunication equipment (telephone set etc.) ensure the use of the Public Telephone Network.

### Access Line ISDN-BRA

Exclusive digital ISDN-BRA line from the ISDN switching center of OTE owned by the end-user to the OTE termination point, as well as a network termination terminal, which together with the call number and the end user's telecommunication equipment (telephone set etc.) ensure the use of the Public Telephone Network.

### WCRM (Wholesale Customer Relations Management)

An information system through which the Provider submits the WLR requests and monitors their course.

## HOW WLR PORTABILITY FUNCTIONS

→ Outgoing calls of WLR subscribers belonging to the call categories of carrier pre-selection scheme 3 are routed according to the applicable terms and conditions as described in the relevant Interconnection Agreement - Carrier Selection Service and Pre-Selection Code and are processed by the Provider's network.

→ Outgoing calls of WLR subscribers which do not belong to the call categories of carrier pre-selection scheme 3, are processed by OTE network. Providers receive WLR subscribers call details (CDRs - Call Data Records) processed by the OTE network. For direct and without delay pricing of the subscribers, the Provider can systematically draw non-invoiced CDRs (Call Data Records) through Secure FTP.

→ Incoming calls, regardless of which network they start, to WLR subscribers terminate through the OTE network.

→ When providing the WLR service, pre-existing digital services on the line included in the categories of digital services offered will be retained.
